GABION CLADDING & WALLING

Max. Height : 1.7m	Total Length : 147m	Total Area : 145m ²
--------------------	---------------------	--------------------------------

Located on the edge of the River Roding, Fresh Wharf is a new development of apartments in Barking which looked to reflect its waterfront location by bringing a more naturalistic feel to the landscaping of the area around the Marketing Suite.

By working directly with the Main Client from an early stage on the project, Hy-Ten was able to more fully understand their needs, and also to offer both design solutions & technical advice which subsequently lead to a better value and more streamlined installation by the sub-contractor.

With a combination of cladding and retaining walls, the gabion installers were able to disguise unsightly reinforced concrete and steelwork behind a unified appearance which is reminiscent of drystone walling, as well as introduce areas for the planting of trees & flowers into what was already an attractive residential location.

If you would like Hy-Ten to design and supply gabions & land reinforcement products for you, please contact us on 01902 712200 or email sales@hy-tengabions.com
